

Clinical Risk Stratification Solution

Target the highest-risk member cohort to drive cost reduction and improved health outcomes.

AdhereHealth's Clinical Risk Stratification Solution simplifies identification, stratification and resolution of care gaps. These powerful interactive dashboards provide population health leaders with online, real-time visibility and decision support for targeted outreach through custom risk configurations and clinical insights.

This solution helps leaders uncover, group and prioritize risks through member, prescriber and pharmacy lenses—giving stakeholders a streamlined ability to achieve value-based care targets.

Benefits of the Clinical Risk Stratification Solution

- Gain around-the-clock access to member data and information
- Isolate cohorts with the most significant risk, with custom filtering that aligns with intervention strategy
- Effectively and efficiently improve clinical treatments
- Promote better patient health outcomes and lower costs of care

How it Works

Users are empowered 24/7/365 through a robust compliment of configurable, simple-to-use dashboards. Starting from the summary dashboard, users access dynamic data visualizations and reports, which provide key insights into population specifics: risk configuration, care gaps, medical conditions and social vulnerability index factors, as well as member, prescriber and pharmacy utilization perspectives.

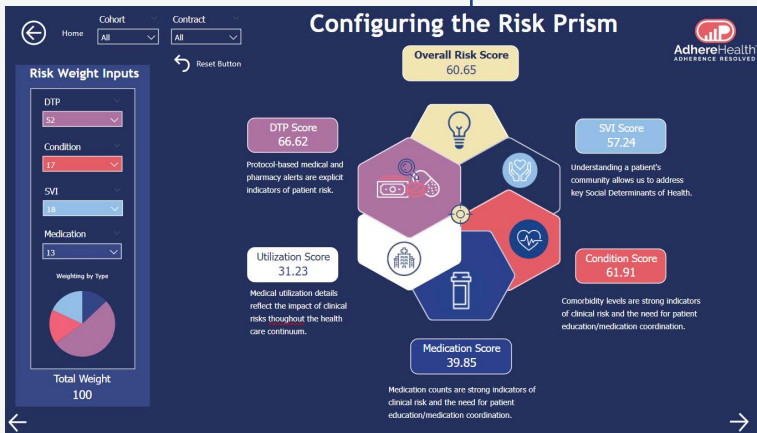

Users tailor information in real time to create target outreach lists and gain actionable insights

Dashboard users can also calibrate an overall risk score and record-level member list based on variable parameters and custom risk weightings for a selected population. Data can be refined by cohort, contract and member. The configurable member list can be exported for immediate action.

Organizations that benefit from this solution include: managed care organizations, self-insured employers, pharmacy management teams and accountable care organizations.

Overall Risk Score weighted by user configurations

Choose risk emphasis with clinical, utilization and social vulnerability slicers

Exportable target lists, filterable by strategic priority

Additional Add-on Modules

Further customize dashboard insights beyond the base module with additional insights, including:

- Specialty Medication Cost and Utilization Insights
- Optimize Care Gap Diagnostics
- Provider Risk Evaluation
- MTM Qualification Simulation
- Part D Measure Opportunity
- Part C Measure Opportunity

Target and engage your highest-risk, hardest-to-reach members. The Adhere Platform™ combines disruptive technologies and telepharmacy services to resolve medication nonadherence. Contact us today to learn how we can help.
